

Credit Name: Advanced Algorithms and Data Structures

Assignment Name: ReverseList

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

```
The list reversed is: 5 4 3 2 1 Exception in thread "main" java.lang.ArrayIndexOutOfBoundsException: Index -1 out of bounds for length 10
at ReverseList.Stack.pop(Stack.java:42)
at ReverseList.ReverseList.main(ReverseList.java:47)
```

I had to change the counter to start at -1 because the for loop would make the index for pop go to -1 which doesn't exist.
