Credit Name: Advanced Algorithms and Data Structures
Assignment Name: QueueList

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

```
Exception in thread "main" java.lang.NullPointerException: Cannot invoke "QueueList.Node.getNext()" because "current" is null
        at QueueList.LinkedList.addAtEnd(LinkedList.java:35)
        at QueueList.QueueList.enqueue(QueueList.java:39)
        at QueueList.QueueListTester.main(QueueListTester.java:26)
```

I forgot to add a case where the current node is null and had to add an if statement to check for that and create a new node.
